> 1 x Cardio Development Kit .
>
> Contents include: 3 x Main Shimmer Wireless Sensor Platforms
>
> 3 x ECG Modules
>
> 12 x ECG/EMG Leads
>
> 3 x Wearable Chest Straps
>
> 2 x USB Readers (This allows for programming and charging of the units)
>
> 3 x MicroSD cards (For storing captured data locally if desired)
>
> 1 x Manual
>
> 1 x Live USB (provides supporting applications, and quick start environment)
>
>
>
> 1 x Main Shimmer Unit .
>
> 1 x EMG Module .
>
> 1 x ECG/EMG Leads .

Simple configuration of three sensors of ECG, one sensor of Temperature and one sensor of SpO2
>
> With receiver of PC with your software.
>
> We do not have a SpO2 sensor. We are planning to release a GPS sensor by the end of January which will include a Temperature sensor in its functionality.
>
> To provide three Shimmer ECG units, the Cardio Development Kit should meet your requirements.
>
> The Development Kits are simply a combination of products, and are designed to meet a specific sensing
requirements. For example, the Cardio Development Kit provides all the components necessary to set up an application that wishes to capture and transfer ECG readings wirelessly.
